BID QUESTIONS / CLARIFICATIONS

1. **Please confirm if an AISC fabricator/installer is required for the steel on this project.-**

   Both the fabricator and the erector shall be AISC-certified. See Spec Section 05 1200-Structural Steel Framing, Sections 1.05 A & B.

2. **There does not appear to be any specification sections after division 28 such as Earthwork, Exterior improvements, or Utilities. Please confirm if there are additional specs that are missing, or if the information on the civil drawings is the extent of the information for these divisions.**

   Refer to both architectural and civil drawings.

3. **Please confirm the install location of the Bird-B-gone netting, I do not see it on the drawings**

   Netting shall be on all covered equipment storage buildings and the wash bay of the Fleet Facility. Every exposed roof to the exterior.

4. **On the architectural drawings there is equipment shown such as the pressure washer, air compressor, ice maker, shelving in parts and battery rooms, workbench, and furniture in the show up room. There doesn't appear to be an equipment schedule with a what is and isn't in our contract, and I don't see any specifications for these things either, please confirm.-**

   Equipment is owner provided.

5. **For the overhead coiling doors, the specifications say that substitutions will be allowed if they match the basis of design in form and function, we have had a few subcontractors reach out asking if any of the following manufacturers will be accepted in place of overhead door company for this bid, Raynor, Wayne Dalton (a division of Overhead Door), CHI, Clopay, or**

Janus? Would the subcontractor need to fill out any special substitution request form for this?-

No

6. **S2.01 has 8 EA F7 spread footers labeled but schedule at top of page only lists F4, F6, & F8. I just wanted to verify if that footer needed to be F7 or F8, and if F7, verify that it's 7' x 7' x 2'. –**

   F7 footings to be 7'x7'x2'. Revised sheet S2.01 to be issued.

7. **Elevation 6 on A4.01 is calling for a 4' high painted CMU wall. I don't see that shown on floor plan.**

   Disregard reference to 4' high painted CMU wall.

8. **Sheet A6.01 shows the restroom walls, at least the "wet" walls, getting tile, or it looks like tile in the elevations. The finish schedule says "paint" for walls. If it is tile, we don't have tile specs.**

   Painted CMU for the walls.

9. **In those same restrooms, is that a 4" CMU behind the toilets & sinks to create the chase? I don't see that it's labeled.**

   Yes 4" CMU.

10. **Where are the toilet compartment specifications?**

    See spec. section 102113

11. **It looks like the interior signage specifications, section 10 1467 (page 5) don't correspond with this job. Can we get clarification on interior signage requirements?**

    Men's Restroom, Women's Restroom, 3 evacuation plan frames.

12. **In the specs they are calling for a AVP wall panel, we were wondering if we can submit a substitution request for either the similar wall panels offered by Varco Pruden and Nucor. I am attaching the data sheets for both wall panels.**

    Yes, please submit during shop drawing submittal.

13. **Is the mezzanine by others or do you want us to include this in our scope?**

    The mezzanine is included in the scope of this project. General Contractor shall coordinate supplier.

14. **In the drawings it mentions Spray Foam insulation. Spray foam insulation can be great in certain structures, but it really does not work well with PEMB's – I wanted to confirm that spray foam will be used and we need to load for it, or do you want a fiberglass alternative?**

    Yes, use spray foam insulation.

15. **Our suppliers have their standard girt's at 8 or 8 ½ I wanted to confirm this is sufficient and acceptable.-**

    Design of girt sizes and spacing is the responsibility of the PEMB supplier.

16. **I wanted to clarify if, red oxide, gray primer or galvalume is the required finish and if it all needs to be the same. One of our suppliers has gray primer for their primary frames but their secondaries are G30 galvanized.**

    Gray Primer for everything.

17. **On the roof only structures it appears to have a 1' overhang – Please confirm if the overhang requires a soffit.**

    Yes, it does.

18. **There is no collateral load noted, can you confirm if a 3# PSF is sufficient?**

    The design loads on S0.01 include +5 psf roof load for miscellaneous (in addition to the building self weight). This +5 psf may be considered the minimum acceptable collateral load for design.

19. **The specs mention a "Bird B Gone" netting system, in lieu of that system, can we substitute this for an interior liner panel? This would completely enclose the roof and would not allow birds to nest in the roof cavity.**

    Yes, submit proposed panel.

20. **Is the portable generator to be supplied by contractor or supplied by others?-**

    Provided by others.

21. **IBC 2024 was adopted statewide in GA as of Jan 2026, S0.01 reference IBC 2018. Please confirm this is grand fathered in on 2018.**

    Note 10 is correct.

23. **Confirm the storage mezzanine will be independent of the PEMB.**

    Storage mezzanine does not rely on PEMB for vertical or lateral support.

24. **S3.03 detail 10 – please confirm the sized angle attaching from the CMU to the PEMB is not by the building supplier, Loading only shown in detail is to be accounted for.**

    Contractor shall coordinate who provides various steel elements.

25. **Please confirm all sized steel is not by the PEMB supplier.**

    Contractor shall coordinate who provides various steel elements.

26. **A3.01 Detail 6 – reference Mtl building insulation typ. Please confirm spray foam will be used per wall sections on A5.01**

    Spray foam

27. **Please elaborate on the 10"+/- dimension referenced on A5.01 details 1 and 2. An 8" girt is shown within a 10" cavity. It looks like 10" girts will be required to go from face of flange to back of panel and keep everything flush at the CMU with hats location. Please advise.**

    10" is to the column line and there is plywood lining on interior up to 10' A.F.F.

28. **Please confirm the roof overhang dimension on the covered equipment storage. –**

    +/- 2'-9", can vary by manufacturer.

29. **Please list which portal frames detail 6 on S3.02 apply.**

    All columns on sheet S1.01 Gridline A, and all columns on S2.01.

Note is referencing the rip rap weir that is the discharge for the stormwater detention pond.

46. Please clarify extents of heavy and light duty asphalt paving accordingly.

Light duty pavement will be utilized in the north parking area (20 space lot) and heavy duty will be utilized everywhere else.

47. Provide waste characteristics for debris removal area? Is waste non-hazardous?

Buried debris is household waste.

    The Contract Agreement and other documents will be filled out by the awarded contractor.

57. **For the Noncollusion Affidavit of Subcontractor, we typically get all subs to sign once the project is awarded and we go to contract with the subs. If these are required to send in with the qualification packet, will I need to have all subs that are bidding the project sign and submit this form?**

    This can be turned in with Contract Documents, if awarded.

58. Is the generator, MTS and the docking station existing? If we are required to furnish these items, can you please provide part and model # for these?

To be addressed with Addendum 3.
